A: Oracle Database 10g Release 2 (10.2.0.5.0) for Microsoft Windows Server 2008 and Microsoft Windows Server 2008 R2. Q: Display detailed information about commits in svn revision history view in Tortoise SVN I have a working copy of a project in svn. Now when I right-click on the working copy and select "Show log" it displays me all the revisions, eg. "Revision 123abc has been added by userxyz". But I want to be able to see information about each revision like "userxyz" has added or deleted or modified a file, what is the contents of that file etc. Basically I would like a tool to navigate my repository view like I navigate my filesystem view. Any ideas or suggestions? A: If you are using TortoiseSVN, you can use the "Show Log" in the context menu on a folder or files and the "Add"-button on the bottom right. Then you get a list of all the commits with the text "added by...", "deleted by...", "modified by..." etc. There is no way to filter out these details from the log view though. To get more detailed logs, use the command line version of svn (svn log --show-item, --show-info, --show-commit-info). Q: Open USB Android tablet via ssh When I connect my Android tablet to my macbook via USB cable and then use this command to find out its USB Port: \$ lsusb It shows up as: Bus 001 Device 002: ID 0bda:0138 Realtek Semiconductor Corp. Realtek High Definition Audio Controller (rev 10) So, I could connect to it via ssh, but couldn't find out how. Edit: For ssh, I tried: \$ ssh -v root@192.168.1.3 OpenSSH_6.2p2, OpenSSL 1.0.1k 8 Jan 2015 debug1: Reading configuration data /etc/ssh_config debug1: Applying options for * debug2: ssh_connect: needpriv 0 debug1: Connecting to 192.168.1.3 [192.168.1.3] port 22. debug1: Connection established. 2d92ce491b
