Field of the Invention The present invention relates to a microcapsule composition for a curable composition, a method for preparing the microcapsule composition, a curable composition using the microcapsule composition and a pressure sensitive adhesive obtained by curing the curable composition. 2. Description of the Related Art In the fields of medical care, such as bio-implantation, the cosmetics and the like, recently the microcapsule technology is indispensable for a material in which medicine, cosmetics, perfume and the like are uniformly dispersed. Therefore, the microcapsule technology has been studied for many years. The microcapsule is formed by a wall-forming material as an outer wall material having a capsule structure and a material as an inner wall material that is enclosed in the capsule. The capsule wall-forming material is provided as a polymer solution containing a hydrophobic substance and a polymer material and the polymer material is dispersed in the polymer solution. Thereafter, the capsule wall-forming material is hardened by a change of the environment, to form the microcapsule. The encapsulation for enclosing a medicament is called encapsulation, and that for enclosing a cosmetic is called microencapsulation. A wall-forming material for microcapsules is used, for example, in the following methods. As a method of dispersing a drug to a polymer material, there is a method in which a drug is first dissolved in a hydrophobic solvent and the drug solution is added to a polymerization system including a monomer. As a result, the drug dissolves in
