The authors analyze retrospectively data on the treatment of 341 patients with urolithiasis from 1997 to 2000. They pay special attention to the treatment of uric acid and calcium stones, which include the total number of operations, the indication for surgery and the efficiency of the use of extracorporeal lithotripsy. The analysis was done according to the size of the stone in four categories. 1. The efficiency of operative treatment of large calculi, 3.6-6.0 mm in diameter, reached 79%, when the kidneys are normal and 88% when they are fibrotic. 2. The efficiency of operative treatment of the stones below 3.6 mm in diameter was 80% in case of normal kidneys and only 26% in case of fibrotic kidneys. 3. In patients with stones sized 3.6-6.0 mm, the indication for operative treatment of the largest calculi (6.0-8.0 mm) is justified. 4. In patients with calculi below 3.6 mm, the indication for operative treatment of the calculi under 4 mm in size is justified.This invention relates to new and useful improvements in means for effecting stripping of insulation from electrical wires. Present methods for stripping insulating covering from wires include the use of various hand tools. However, these hand tools are not easily used and are often very cumbersome. Additionally, the use of these hand tools is often difficult for a person who is not skilled in such stripping. In other words, a person who is skilled in the use of hand tools may be able to utilize the hand tools at once, but the average or ordinary person would have to work out a series of steps for stripping the insulation
