Maternal restriction affects adult anxiety behaviour in the offspring. Maternal effects are often implicated in anxiety-related disorders in the offspring. Some epidemiological studies suggest that maternal weight gain in pregnancy increases the risk of anxiety in the offspring; however, the biological mechanisms underlying this association are still unknown. An excess of weight gain in pregnancy may affect the offspring through changes in maternal hormonal function, which may lead to alterations in hormone-dependent behavioural changes in the offspring. Here we studied the effects of maternal under- and over-feeding on anxiety-like behaviour in male and female rats. Offspring of dams fed 20% and 60% of their normal ad libitum food intake during pregnancy exhibited higher levels of anxiety behaviour when tested in the elevated plus-maze in adulthood. On the other hand, dams fed 60% of their ad libitum food intake during pregnancy did not show any alterations in anxiety-like behaviour. Both maternal over- and under-feeding produced an increase in body weight in female offspring, but had no effect on body weight in male offspring. These results suggest that altered maternal nutritional status during pregnancy may affect anxiety-like behaviour in the offspring, both male and female. These findings provide new evidence about the effects of maternal nutritional programming on anxiety-related behaviour in the offspring.

Q: How to get Epson R500 printer working on ubuntu 16.04? I have a R500 printer that I am trying to use on a pc running ubuntu 16.04, but it isn't working, for some reason I get a complaint from the printer that it cannot find the usb interface. The printer is not even listed in the printer administration tool. I have found this post on reddit (How to install Epson WorkForce R500 as Ubuntu printer?) but it doesn't answer my question. It is way too complicated, and has lots of software involved, none of which I want. I want to be able to use my printer to print text files, and have done so on a previous version of ubuntu, but on this new version there are so many differences I don't even know where to
