## Kraken Reports [Mac/Win]

Kraken Reports Product Key is a simple to use, and highly functional log analyzer for ISA Server and Squid. It logs activity on a network and generates reports of your network activity. Data is captured from multiple network sources including computers running both Windows and Unix systems, and can be downloaded to your local computer or network server. Reports include details on how much time is spent downloading, total download size, average download rate, cache hit and cache denied rate, as well as the names of the users accessing the files. You can sort the reports by user, logon time, and computer name. Installation: Download the latest ZIP file and unpack it in a temporary location. Click Install to install the program. Right-click on Kraken Reports.lnk in your Start Menu, and click Run As Administrator. Close all other programs when prompted. You will now see a Kraken Reports icon in your system tray. Right-click on the Kraken Reports icon and select Settings. Click the Info tab. Click Apply to save the changes. Select OK to exit the Settings window. Click Restart Kraken Reports. The program should now be ready to use. Restart Squid or ISA Server and start logging to see the reports. After the first reboot the program will ask if you want to update the program. The program is always updated from the Internet. If you do not want to update, simply exit the program by clicking Exit. Kraken Reports Version 2.2.0 Reports are now faster to generate. The location of the log file for a computer is now displayed next to the computer name. The report filter window no longer opens. The program is now more responsive to the mouse. Bug fixes • It will no longer crash after a reboot. • The program will no longer halt during any future updates. • The Readme file is now correctly located. • The Users table no longer ceases to function correctly. • The REFERER is now correctly displayed when analyzing traffic to a web site. • The program will no longer display "Access was denied to the specified group" when downloading is enabled. • The program 6a5af4b4c

## System Requirements:

Spitfire (American Tier 2b) is a mix of PvE and PvP and is a slightly older server than some of our other servers. If you are looking for a fast paced PvP experience, this is not for you. Sprint: Sprint (American Tier 1) is a solid mix of PvP and PvE which we would consider the successor to Cupcake (where PvP was the exception) Vault: Vault (American Tier 2) is a PvE/PvP mix which has a small group
