As you'll learn in this chapter, there are lots of ways to do things in Photoshop. Some people prefer the traditional method of using menus, while others like to use keyboard commands. Some people use Photoshop like a program for pixel manipulation, while others prefer to use Photoshop like a photo-editing application. But one thing's for sure: Photoshop has a lot of features. To use all of these features, you'll have to learn the different ways to approach the software. This chapter gives you an overview of the powerful features of Photoshop. After learning a couple of techniques in this chapter, you'll be ready to edit images in Photoshop in the next chapter. ## Getting Started with Photoshop Photoshop is a fairly sophisticated application. However, to use Photoshop effectively you should start with a clear understanding of how to use it. How do you launch Photoshop? What color mode do you work in? Are you working in RGB mode or CMYK mode? What color model do you work with? How do you load a file? What are the primary tools available for editing a photo, and how do they work? What tools do you use to create a layer, and what layer are you working on? What do you do when an image has more than one layer? Knowing the answers to these questions will make the rest of this book much easier to understand, and

Q: AWK - Selecting and counting characters in the first n lines I have a text file in format: first_line the_second_line the_third_line How do I select the first n lines (first_line, the_second_line, the_third_line,...)? My expected output is a table with two columns: 1) Number of occurrences of each character in a line 2) Number of occurrences of each character in the lines I selected first_line 2 4 5 the_second_line 4 2 3 ... My idea: tail +3 input.txt | cut -c 1-20 > first_20.txt tail +3 input.txt | cut -c 1-20 > second_20.txt But it does not work, it only prints out the first lines of the file. Thanks in advance. A: As suggested by @Yaron Mazor, the trick here is to use a awk script that will process all the lines in the file but keeping only first 20. And it is done using NR variable. NR refers to the number of records that awk is processing. And the records are lines. awk '/^\$/ { cnt[NR]=cnt[NR]?"":\$0 } END { for (i=1;i first_20.txt Q: Qual è il significato di "rottamare"? Nel romanzo Il viale dei Mille, di Leonardo Sciascia, ho letto: Appena comparve il marito, dopo tre giorni, e senza avervi fatto meno male degli altri, aveva rottamato i suoi compagni, che ne sbirciarono come un'imbarcazione alla

I installed a custom Grub2 bootloader on a custom partition from a Ubuntu ISO and I would like to remove it. There are so many tutorials and explanations for the GRUB installation but so far I was not able to find a comprehensive solution. I have created a liveUSB with Ubuntu Desktop with persistence so far but I don't know how to remove Grub. There are three different "device" lines in /etc/fstab (for /, /boot and a swap partition) and all three entries are identical. I just want to delete the grub.cfg of the custom partition. If I do sudo grub-install --boot-directory=/mnt/boot /dev/sda it complains about an invalid device. I did also try to install GRUB into /dev/sda by creating a partition manually from the Ubuntu ISO with an editor, but it is not possible to write into the raw device. A: According to this topic on askubuntu.com, it seems that you need to remove all the grub related files first and then you can install the grub from Ubuntu live USB. But in case of overwriting the MBR, you need to select all the drive type in the installation options and then it will overwrite the MBR automatically. I also found this thread on askubuntu.com which also suggest to install the grub again but this time, it will install it into your partition. Can you try to format your custom partition, then restart the computer and then remove the custom grub using the commands below. sudo grub-install /dev/sda sudo grub-install --recheck /dev/sda If it will still not remove the custom grub, we can try to install GRUB into the MBR
