[The below features list is an excerpt from Autodesk's official documentation. The complete version can be downloaded here.] AutoCAD 2D Drawings: AutoCAD 2D was the first version released. It was developed for the Windows operating system, and introduced features that made AutoCAD different from all previous CAD programs. AutoCAD 2D was specifically designed to work on relatively inexpensive computers, and was fully vector-based. This meant that 2D objects could be zoomed to any size, as if they were drawn on a screen of unlimited size, and they could be rotated and viewed from any angle. 2D CAD features are found in most software applications now, and are referred to as parametric modeling features. When supported in a software application, these features can be used in 3D applications as well. 2D Objects: AutoCAD 2D offered an array of features to create and modify 2D objects. You could draw: Rectangles Circles Ellipses Lines Polylines Freehand lines Unconnected lines Ellipse rings Arc rings Arc rings with holes Ribbons Cup (upside down cup) Tables Line & arc tags Named Objects Edges faces faces with tags faces with outlines faces with radiuses faces with angles primitives with shapes primitives with lines primitives with arcs primitives with patterns primitives with colors primitives with tags multipatch Split faces Split faces with tags Dimension styles Polynomial curves Quadratic curves Conic arcs Properties And much more... AutoCAD introduced the concept of Parametric Modeling. You can draw, edit, and measure a drawing without having to redraw it if it is changed. For example, you can draw a rectangle, then change one of its dimensions, and, without redrawing the rectangle, all references to the rectangle will be automatically updated. This is accomplished by maintaining a geometric history record for each feature in the drawing. The history record is automatically updated to reflect the changes in size, orientation, and location of any one or more features.

Autocad System and Team Edition products are closed and can only be used internally within Autodesk. They can be purchased by a business that does not intend to share the product with third parties. Autocad System and Team Edition are for full AutoCAD functionality, but are not free. OpenGL AutoCAD supports all OpenGL functions. LiveLink LiveLink is a technology provided by Autodesk that allows the integration of the AutoCAD software into external systems such as mobile devices, desktop computers, cloud computing, enterprise resource planning (ERP) systems, and enterprise asset management (EAM) software. LiveLink was introduced in Autodesk 2013. LiveLink leverages the COM interoperability technology, which allows components to be installed and run in a web browser. The COM interoperability technology runs the "dynamic link library" (DLL) files that Autodesk uses to integrate AutoCAD with applications outside of AutoCAD. The DLL files run in the web browser where the host application resides. LiveLink makes it possible to see the work that the user is doing in AutoCAD. LiveLink is integrated with AutoCAD's cloud-based apps such as Project Builder, Rendering, 3D Warehouse, BIM 360, AutoCAD's built-in collaboration features, and

PowerBI. PowerBI Integration between LiveLink and the PowerBI data visualization tool was introduced in Autodesk 2016. WebSocket Autodesk introduced the ability to communicate with AutoCAD over a WebSocket connection in AutoCAD 2017. WebSockets are a way of providing bi-directional communication between a client and a server, usually over the Internet. AutoCAD 2017 includes a tab for WebSocket support. VRML/X3D Virtual Reality Modeling Language (VRML) was the native file format of AutoCAD from version 2.0 to version 2006. VRML, which became obsolete in 2006, is still supported by AutoCAD. X3D is a file format that combines the advantages of the Open Architecture Framework (OAF) and the standard-based open source XML. It is specified by ISO. It was introduced in AutoCAD 2013. Visual LISP AutoCAD supports Visual LISP (V-LISP), a product development language created by Autodesk and distributed as part of AutoCAD. a1d647c40b
